

The Airley

A Dynamic Seating Solution

VANERUM
NORTH AMERICA

The Airley Collection

Airley is an extensive collection of classroom seating. Designed for dynamic movement, Airley heeds to the natural need to shift positions. Its design features ergonomic lumbar support which naturally follows the curve of the lower back for optimal spine alignment. Airley can be configured to fit any environment through its multiple base options and wide variety of standard or custom shell colors.

Ergonomics

Dynamic Movement

The Airley chair takes into account the need to move and frequently change positions. Built with 5 active flex points, the Airley responds and adapts to forward, backward, and side to side movements. The reinforced back adds strength while remaining flexible.

Unique Contour

The modest size and contour of the shell is designed to respond as the user shifts positions without constricting movement. Ergonomic lumbar support naturally follows the curve of the lower back, reducing the amount of pressure on the spinal column (1). A unique waterfall edge provides comfort for the legs and prevents pinch points (2). The subtle anti-slip texture encompassing the shell provides a secure grip for sitting comfortably (3).

Detail of secure anti-slip texture

Chair Stacking

Airley 4-leg and wire sled models are stackable for easy storage. 4-leg models stack up to 5 high while wire sled models can stack up to 10 high.

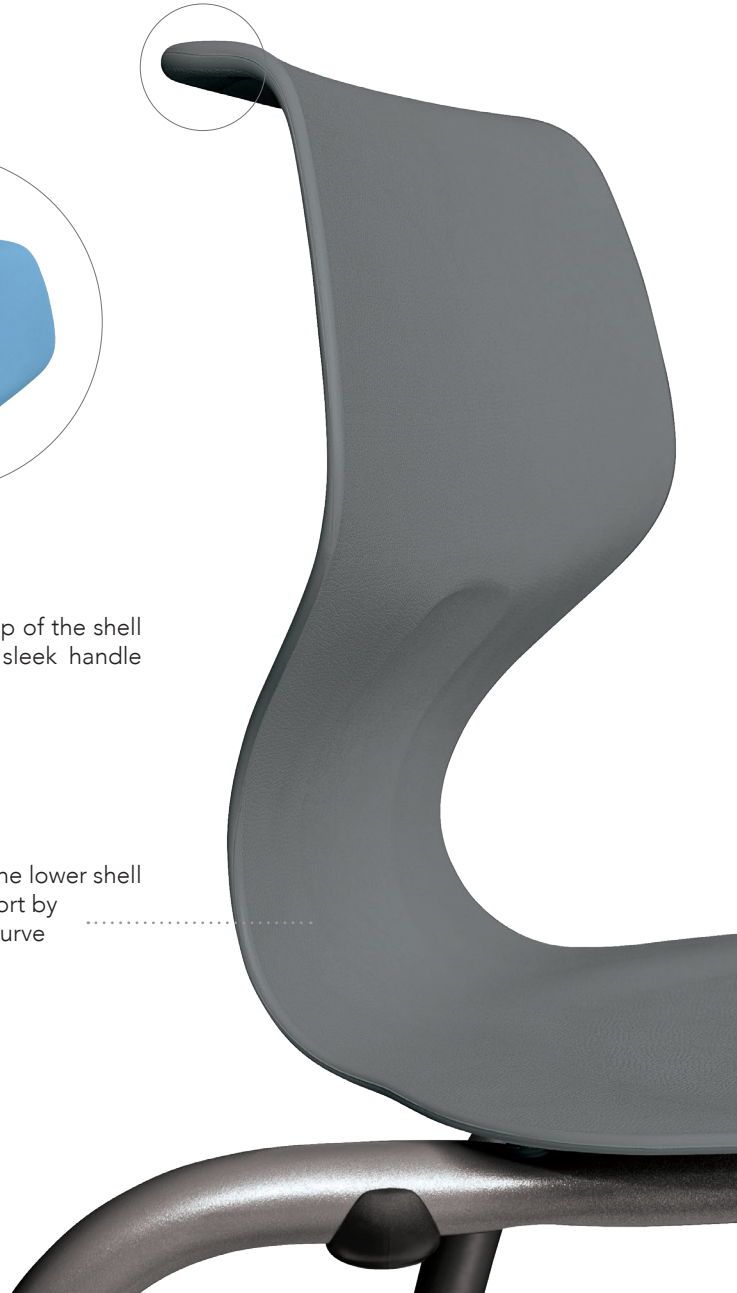

Sleek Handle

The elegant curved top of the shell serves as a discreet, sleek handle for easy repositioning.

Lumbar Support

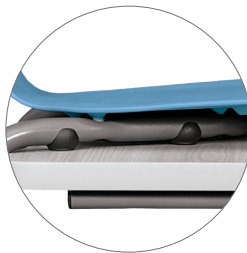

The concave form of the lower shell provides lumbar support by following the natural curve of the lower back.

Non-Scratch Table Stacking

The Airley cantilever frame allows for non-scratch stacking on top of tables. The built in buffers mean that your surfaces will be safe from any marks or abrasions.

The Airley 4-leg frame is designed with the same aesthetics as our Stance desks, allowing you to create a visually cohesive classroom.

Airley cantilever chairs paired with Curve cantilever desks create a dynamic learning environment.

Non-Marking Glides

Keep your floors pristine. Non-marking glides are available on Airley 4-leg, cantilever, and wire sled models.

Finish Options

Frame Variations

The Airley is available in a multitude of different sizes, making it ideal for any educational or commercial setting. The 4-leg, 5-star, and wire sled frames are available in stool heights as well as standard chair sizes, while the cantilever frame is available in several different chair heights.

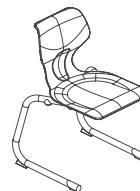

All frames are available in platinum, charcoal metallic, or black finish.
